

AI-Powered SIEM in Action Webinar:

September 24th-12:30 pm ET

Description

Join White Rock and SentinelOne to see how AI-driven SIEM turns massive log data into actionable security outcomes with real-time detection, natural language queries, and automated response. Security teams are drowning in alerts, fragmented tools, and endless log data.

SentinelOne's Vigilance MDR empowers security professionals to focus on more strategic initiatives by delegating threat monitoring, review, and triage to a global team of in-house experts.
